

Michael M. Fawehinmi

Revere, MA 02151 | (781) 913-3592 | mfawehinmi14@gmail.com | <https://omfawehinmi.github.io/portfolio/>

PROFESSIONAL SUMMARY

Senior Data Engineer and AI solutions architect driving impactful business decisions through advanced analytics, LLM-powered intelligence, and automated process improvements. Deep expertise in Snowflake data architecture, Power BI enterprise reporting, and end-to-end AI pipeline development. Proven ability to translate complex business requirements into scalable, production-grade data and AI systems for C-suite stakeholders.

- 10+ years in big data analytics and data engineering, with deep specialization in AI, Machine Learning, and Snowflake Cortex LLM development.
- Architected and deployed Snowflake Cortex LLMs and AI-powered Power BI assistants for C-suite leadership, delivering accurate self-service business intelligence.
- Accomplished in enterprise analytics visualization, designing intuitive executive interfaces that surface actionable insights to key stakeholders on demand.
- Proficient in building end-to-end analytic and AI pipelines at scale, spanning ETL architecture, schema certification, and LLM integration using Python, SQL, and Snowflake.
- Proven innovative problem solver, applying cutting-edge AI and data technologies to solve complex business challenges in fast-paced environments.

PROFESSIONAL EXPERIENCE:

NetApp, Waltham MA (remote)

January 2026 – Present

Senior Data Engineer (contract – 6 months)

- Engineered a comprehensive SuccessFactors OData API to Snowflake integration, designing ETL pipelines, stored procedures, and scheduled data migration tasks.
- Integrated SuccessFactors, Fieldglass, Eightfold, and Visier into both One Model and Snowflake using SFTP, API, and custom data connectors.
- Developed complex SQL views across certified schema layers supporting multi-process ETL workflows and downstream reporting consistency.
- Built and deployed Streamlit applications for real-time pipeline monitoring, proxy connectivity management, and data refresh capabilities.
- Architected Power BI service account schemas with direct query integration, enabling scalable and performant enterprise reporting against Snowflake.
- Gathered and documented integration requirements, collaborating with business stakeholders, system representatives, and engineers to ensure alignment.
- Built Power BI reporting pipelines for back-to-office initiative, global giving campaigns, and compensation reference dashboards for people leaders.
- Configured Google Maps API with Python traffic models to calculate employee commute distance and time in support of back-to-office policy.

Novanta Corporation, Bedford MA (remote)

January 2021 – December 2025

Senior Data Engineer (full-time)

- Led the full Snowflake integration initiative as sole engineer, from project planning and requirements gathering through architecture, development, and production deployment.
- Integrated Workday HRIS to Snowflake via Web Services and Public API, building ETL pipelines, stored procedures, and full schema architecture including raw/staging/production layers, row access policies, dynamic data masking, and nightly maintenance procedures.
- Developed and engineered full SharePoint integration leveraging Microsoft Fabric and Snowflake Open Catalog, enabling seamless data flow between collaboration and enterprise data platforms.
- Developed and deployed Snowflake Cortex LLMs for enterprise business reporting, embedding years of domain-specific logic and business conditions into AI model design.
- Designed AI schemas with nuanced business rules and conditional logic, enabling LLMs to deliver robust, accurate, and self-service reporting outputs.
- Eliminated all Tier 0 and Tier 1 reporting requests by replacing manual query workflows with Snowflake Cortex AI-powered self-service reporting.
- Designed a dynamic Python toolset of business-focused, statistical, and algorithmic models supporting data-driven decision-making across the organization.
- Created a comprehensive Power BI reporting library for C-suite and CHRO with an interactive and user-friendly executive interface.
- Implemented workforce planning and financial models to capture and quantify the monetary impact of human capital movement.
- Built a dynamic business-level sensitivity analysis platform for monitoring capacity planning and human capital demand.

Salesforce, Boston, MA (remote)

July 2020 – December 2020

Lead Python Developer (contract)

- Implemented Workday Web Services and REST API pipelines for enterprise-scale workforce data migration, covering ingestion, transformation, and load across HRIS schema structures.
- Defined integration architecture and solution requirements, translating HRIS business rules into precise data validation and processing logic.
- Led design and delivery of a full-scale Python HRIS data conversion application for SAP SuccessFactors, encompassing validation logic and error handling frameworks.
- Built automated data quality assurance workflows with actionable failure reporting, ensuring reliable system-to-system data integrity throughout the project.
- Developed Power BI performance monitoring dashboards tracking pipeline reliability and throughput across the full SuccessFactors conversion lifecycle.

Shared Services Data Engineer (*full-time*)

- Designed and implemented REST API endpoints integrating internal HR systems with Workday, Greenhouse, and SuccessFactors as the sole integration architect for cross-system data flows.
- Built and managed end-to-end ML model lifecycle — versioning, performance monitoring, and drift analysis — for predictive attrition and growth models using GLM, GLMM, and SARIMAX.
- Led vendor evaluation and solution architecture reviews for HRIS platform enhancements, assessing integration fit, compatibility, and infrastructure requirements.
- Fully automated ingestion, processing, and reporting pipelines for macroeconomic data from the Bureau of Labor Statistics and Johns Hopkins COVID-19 datasets.
- Developed C-suite and CHRO Power BI dashboards surfacing predictive model outputs and workforce planning insights, translating complex AI results into executive tools.
- Acted as technical liaison between HR, IT, and external vendors; facilitated biweekly cross-functional delivery meetings to align on integration milestones.

EDUCATION

Worcester Polytechnic Institute, Worcester, MA

Master's in Data Science | Pioneering Program, Completed in Fall 2023

Relevant Coursework: Data Analytics and Mining, Statistical Methods for Data Science, Deep Learning and Machine Learning, Database Management Systems, Bayesian Statistics, Applied Multivariate Statistics

Bentley University, Waltham, MA

Bachelor of Science in Finance with Concentration in Capital Markets, Completed in Spring 2018

Relevant Coursework: Quantitative Portfolio Management, Advanced Probability and Statistics, Advanced Financial Modeling, Advanced Concepts in Programmatic Modeling

CERTIFICATES & SKILLS:

Data Analytics Certificate (x3); Database Architectural Development; Snowflake Cortex (LLM, Cortex Analyst, Cortex Search); Machine Learning; Deep Learning; Bayesian Statistics; Gaussian Process; GLM/GLMM/SARIMAX; Scikit-learn; TensorFlow; Statsmodels; Scipy; Snowflake (Snowpark, Row Access Policies, Dynamic Masking, Stored Procedures, Tasks, Open Catalog); ETL/ELT Pipeline Design; Schema Certification; SQL; Spark; Hadoop; Alteryx; Control-M; FTP/SFTP; Workday (Web Services, REST API, Public API); SAP SuccessFactors (OData API); Fieldglass; Eightfold; Visier; Greenhouse; One Model; Microsoft Dynamics; Microsoft Azure; Azure Data Factory; Microsoft Fabric; AWS S3; Google Maps API; Kiteworks; Beacon; Agile/Waterfall; Power BI (Direct Query, Service Accounts, DAX); Streamlit; Tableau; Python (Pandas, Numpy, Scikit-learn, Matplotlib, Scipy, Statsmodels, TensorFlow); R; C#; APIs (REST, SFTP, OData); Web Scraping; Data Mining; Microsoft Office; Workfront
